

Here's a starter list of keywords to copy and paste into the Comment Blacklist field in your WordPress admin dashboard. This field is located at Settings > Discussion.

While this list won't completely prevent spam comments from entering your comments queue, it will at least help filter some of them into your Spam list. You can always add to this list with words found in Spam comments that make it into your comments queue. Be sure to remove the metadata before you copy and paste this list. For instructions on how to do that, read this article:
